PROFILE

Associate Engineer with 2+ year of experience in developing and maintaining data pipelines and **ELT** workflows. Utilized technologies like **Python, SQL, PySpark, Databricks, and Azure**. Contributed to building reliable data pipelines and assisting in **data warehouse** operations while ensuring data quality and performance.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Javascript, C++
Big Data Technologies: Spark, PySpark, Spark SQL
Cloud computing: ADF, ADLS, Azure Synapse, Databricks, Aws S3 , AWS IAM
Data Engineering Tools: Data Modelling, ETL/ELT data Pipeline
Orchestration: Apache Airflow(Basics)
Other: Documentation, Docker(Basics), ReactJs, NodeJs, Mongoose, RESTAPI, Git

EXPERIENCE

KPIT Technologies

Aug 2024 – Present

Associate Engineer

Bangalore, India

- Engineered scalable data pipelines on Azure Databricks to process **2–3 million** automotive telemetry records/day (CAN/BLF logs), ingesting raw **CSV files** into **ADLS** and transforming them into optimized Delta formats for downstream analytics.
- Implemented a **Medallion(Bronze–Silver–Gold)** architecture and built **ELT** pipelines using **Azure Data Factory (ADF)**.
- Implemented **data validation** checks to improve the data redundancy and data processing to near **80%**.
- Engineered early-warning telemetry features (thermal anomalies, RPM irregularities, behavioral outliers) enabling proactive identification and prioritization of at-risk vehicles in the fleet.
- Boosted Spark pipeline efficiency by leveraging broadcast joins, caching, and predicate pushdown, cutting processing time by **30%** for daily workloads exceeding **2 million records**.
- Built **incremental** ingestion using **Auto Loader**(CloudFiles) with **Spark Structured Streaming**, ensuring scalable and reliable data ingestion.
- Implemented **Delta Lake features** including merge/upsert, Change Data Feed, and **Delta tables** for efficient incremental processing.
- Engineered scalable, event-driven workflows leveraging **Azure Logic Apps**, streamlining data pipeline orchestration and minimizing operational overhead through end-to-end automation.

KPIT Technologies

Nov 2023 – July 2024

Trainee

Bangalore, India

- Developed reusable **React components** for a real-time vehicle telematics dashboard using **Hooks** and **Redux**, featuring asynchronous data fetching, interactive visualizations, and dynamic tabular views.
- Developed Python Automation executable scripts to automate the manual process to increase the teams productivity by **80%**.
- Developed a CLI and **npm** package to automatically delete or comment console statements in **JS/TS** projects. Leveraged **Babel AST** parsing for accurate and safe transformation of console logs, preserving code structure.

EDUCATION

Samrat Ashok Technological Institute

Vidisha, MP

Bachelor of Technology in Electronics and Communication

Aug. 2019 – May 2023

Certifications

Database Management System
Databricks Fundamentals

Achievements

High Flyer Award (KPIT): Received twice for delivering pipeline efficiency improvements and optimizing data processing workflows.

High CSAT Score (KPIT): Recognized for consistently delivering high client satisfaction through quality work and reliable execution.
