PROFILE

Associate Engineer with 2+ year of experience in developing and maintaining data pipelines and **ELT** workflows. Utilized technologies like **Python, SQL, PySpark, Databricks, and Azure**. Contributed to building reliable data pipelines and assisting in **data warehouse** operations while ensuring data quality and performance.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Javascript, C++
Big Data Technologies: Spark, PySpark, Spark SQL
Cloud computing: ADF, ADLS, Azure Synapse, Databricks, Aws S3 , AWS IAM
Data Engineering Tools: Data Modelling, ETL/ELT data Pipeline
Orchestration: Apache Airflow(Basics)
Other: Documentation, Docker(Basics), ReactJs, NodeJs, Mongoose, RESTAPI, Git

EXPERIENCE

KPIT Technologies

Aug 2024 – Present

Associate Engineer

Bangalore, India

- Engineered scalable data pipelines on Azure Databricks to process **2–3 million** automotive telemetry records/day (CAN/BLF logs), ingesting raw **CSV files** into **ADLS** and transforming them into optimized Delta formats for downstream analytics.
- Implemented a **Medallion(Bronze–Silver–Gold)** architecture and built **ELT** pipelines using **Azure Data Factory (ADF)**.
- Implemented **data validation** checks to improve the data redundancy and data processing to near **80%**.
- Engineered early-warning telemetry features (thermal anomalies, RPM irregularities, behavioral outliers) enabling proactive identification and prioritization of at-risk vehicles in the fleet.
- Boosted Spark pipeline efficiency by leveraging broadcast joins, caching, and predicate pushdown, cutting processing time by **30%** for daily workloads exceeding **2 million records**.
- Engineered scalable, event-driven workflows leveraging **Azure Logic Apps**, streamlining data pipeline orchestration and minimizing operational overhead through end-to-end automation..
- Built proactive real-time alerting and notification systems to detect pipeline failures and anomalies, driving faster incident resolution and strengthening overall system reliability..

KPIT Technologies

Nov 2023 – July 2024

Trainee

Bangalore, India

- Developed reusable **React components** for a real-time vehicle telematics dashboard using **Hooks** and **Redux**, featuring asynchronous data fetching, interactive visualizations, and dynamic tabular views.
- Developed Python Automation executable scripts to automate the manual process to increase the teams productivity by **80%**.

PROJECTS

End-to-End Pharma Pipeline

Github

- Engineered an **end-to-end pharmaceutical data pipeline** on **Databricks** with **AWS S3**, handling manufacturing, QC, and clinical datasets.
- Built **incremental** ingestion using **Auto Loader**(CloudFiles) with **Spark Structured Streaming**, ensuring scalable and reliable data ingestion.
- Developed **Silver layer transformations** with data quality checks (null validation, standardization), schema evolution, and business rule enforcement.
- Implemented **Delta Lake features** including merge/upsert, Change Data Feed, and **Delta tables** for efficient incremental processing..
- Orchestrated pipelines using **Databricks Jobs** with conditional execution (holiday-based skipping), alerts, and **AWS IAM**-based secure access control.

NPM Package | *Javascript, Babel AST*

Github

- Developed a CLI and **npm** package to automatically delete or comment console statements in **JS/TS** projects. Leveraged **Babel AST** parsing for accurate and safe transformation of console logs, preserving code structure.
- Built dual modes: delete for removing and comment for temporarily disabling console statements.

EDUCATION

Samrat Ashok Technological Institute

Bachelor of Technology in Electronics and Communication

Vidisha, MP

Aug. 2019 – May 2023

Certifications

Database Management System

Preview

Databricks Fundamentals

Preview
